# 9. Family Portal

The Secure Family Portal is designed with the purpose to foster active engagement by everyone involved with the senior. By bringing the power of social media to elder care, the portal ensures that families stay connected to their loved ones regardless of the physical distances between them.

- Get the real-time location of a loved one by logging into the Secure Family Portal
- Exchange photos, videos, audios, and text with loved ones
- Receive photo, video, audio, text, and updates from loved one's community/facility
- Activity calendar keeps you updated with their daily routine

# 10. Telehealth Portal Login

## 11.CareProvider Mobile App

A one of its kind, very powerful mobile app that provides the location of residents, staff, visitors, and all key assets in a community at one tap on your mobile device.

- Demonstrated to have saved countless hours spent on non-care activities by staff
- The powerful preemptive alerting system has prevented many undesirable incidents from occurring.
- Simply knowing the nearest care provider to respond to a call significantly increases the efficiency of care and increases safety of residents and staff alike.

#### 12. Location Devices and Wearables

We work with our clients to determine what best wearables work for their communities. The wearables can be customized to suit resident needs and incorporate devices like Apple watches, etc. Note a sample of the wearables and wireless Clinical Grade location devices below. Efficient battery usage allows for 3-5 years of battery life.

#### **Exciter**

Low Frequency (LF) Exciters enable several locating features such as egress detection and choke point control. When a tag enters the LF Exciter sphere, the tag's sensor is triggered and immediately reports this event to the Family CareSpace Intelligent Data Analysis Center for appropriate action.

#### **Monitor**

Monitors provide room-level certainty for Real-Time location services using Infrared. The Monitor is an infrared signaling unit for asset, staff, and resident locating. Each Monitor transmits an infrared pulse pattern containing a unique location code.

#### Resident wearable with button

These wearables enable facilities to monitor resident locations and automate workflow. Residents enjoy having the freedom and flexibility to move around a community as supported by their care plan. Can be worn as a pendant, on the wrist, or attached to clothing, walker, etc. Several options are available for wrist band customization.

Duress Badges enable immediate response times during emergencies by instantly locating the specific resident under duress. In the event a resident needs assistance, a discreet push of a button on this badge, summons a wireless call for help and provides others with precise location information for a quick and reliable response.

### **Staff Badge**

Ultra-thin (only 3.8 mm), light weight, and the size of a standard community issued ID badge. The customizable buttons can be assigned based on various use cases, such as one button for emergency help, and one for staff assistance requests.

#### Virtual Wall

Virtual Walls are Infrared signaling units to provide a method of locating tagged assets or people for facilities that require sub-room level accuracy. Virtual Walls are geared to semi-private rooms and bays typically found in Senior Living Communities and Nursing Homes. Unlike room-level monitors, Virtual Walls do not need physical walls to limit the area of coverage and play a vital role in early detection of potential fall risks for residents.
